

Build a Lyric Search App

1. Use the API provided by lyrics.ovh
2. Create a form to let users enter in a musical artist and song title.
3. When the user submits the form, use the Fetch API to make calls to lyrics.ovh and display the lyrics for that song.
4. Make it look nice. :)
5. Create a Github page and submit the link in Brightspace.

Bonus: Take a look through this list of public APIs and think about what else you might want to build.
